kubernetes #56622 issue #56261

commit aac60b6cbbe330bd6c9ef37bc52ec607fe8f6298

问题: scheduler在调度时重复输出错误信息

复现:在schedule环节移除一个node

原因:当scheduler没有在自己的cache中找到对应的node(比如此时node已经离开cluster),就会从进入到处理错误的函数,默认的处理错误的函数是MakeDefaultErrorFunc,它会在报错之后进入重试环节。如果该node一直没有,就会一直报错,以至于重复输出错误消息

**修复**:在默认处理错误的函数中,判断是否是没有找到node的错误,如果出现两次,就从cache中移除该node

```
